WAGNER'S LEGATO™ RAILING COLLECTION COMBINES SIMPLICITY WITH STYLE

Manufacturing leader launches sleek, durable glass railing system with a range of options to customize your look

Milwaukee, WI – April 1, 2015 – Wagner introduces its new, easy-to-install, quality glass railing collection that comes in a range of high-performing, attractive design options to customize its visual appearance.

The Legato Collection's straightforward installation process makes it an ideal solution for a range of projects and applications. The non-weld system allows for faster, simpler installation with no special training necessary. Plus, with minimal glass preparation required, the streamlined and uncomplicated installation results in a significant reduction in labor costs.

Despite its simplified installation process, Legato maintains quality as well as safety and code compliance when properly specified and installed. Constructed with Type 316 satin-finished stainless steel, the metal railings provide low-maintenance durability with superior rust resistance, making it ideal for outdoor performance. Also deemed a Green building material and worthy of LEED credits, its sleek, clean lines and glass infill system provide a sophisticated and bright aesthetic value to enhance the overall look and feel of any space.

The collection's simplified ordering process also eliminates confusion and saves time. Legato is available for prompt shipping, and all metal railing components arrive together. Specs and drawings are also readily available to further streamline the selection process. Legato comes in two options:

The Legato Railing Collection accommodates guard, stair or ramp applications for a range of glass thicknesses. The glass infill is secured via glass mounting hardware, and the system is available in an assortment of post shapes and glass mounting designs, offering surface, embedded and fascia post mounting options with mid, end and corner post configurations.

The Legato SRP option accommodates straight guard applications with a 1/2" glass thickness. The glass infill is secured via slotted tube rails that are held in place with concealed fasteners. The Legato SRP offers surface and fascia post mounting options with mid, end and corner post configurations.

Wagner's Legato Railing Collection fulfills demand in the marketplace for an attractive, quality, easily specified and installed glass railing solution without the hassle typically associated with these types of applications.
